Crypto currencies are now accepted as payment option for sms77

March 9th, Kiel. sms77 now also offers crypto currencies such as Bitcoin, Ethereum, Ripple, Dash, Litecoin, Monero and others as payment options. Thus the SMS Gateway Provider supplements its offer around a digital innovation, which corresponds to the own business philosophy.

In cooperation with the provider CoinPayments, an integrated payment gateway, sms77 now enables its customers to pay via digital crypto currency. Conversions, exchange rates and fees can be viewed on the responsible website. Besides systems and platforms for processing smart contracts such as Ethereum and Ripple, well over 250 altcoins are currently supported there. In addition to the already mentioned currencies, these include also Bitcoin Cash (BCH), DigiByte (DGB), Lisk (LSK), Syscoin (SYS), Vertcoin (VTC) and Waves.

The payment procedure differs from other modules in the structure of the interface and the actual payment processing. Thus, the current exchange rate determines the exact settlement amount. The amount, which is charged at the end as credit at sms77, remains unaffected by the exchange rate fluctuations. Depending on the coins they collect (prospect), customers can select the corresponding abbreviation, whereby the conversion rate is also indicated. So it can be more lucrative to pay with DASH instead of DODGE. A little know-how and mathematics is required here. However, experienced miners usually know the value of their coins by heart anyway. A prerequisite for customers to use the payment method is a registered account with CoinPayments and of course sufficient credit in the form of the chosen crypto currency.

In the background, entire networks of high-performance computers then start calculating complex algorithms in order to complete the transaction in a matter of seconds. For the customer himself, the ordering process is completed with just a few mouse clicks.

Why sms77 now decides to pay by crypto currency is mainly due to the already proven technical implementation as well as the high degree of recognition and increasing popularity of the digital coins. Last but not least, the company is also committed to the advancement of modern technologies. Even if the company is permanently interested in new developments and has experienced employees in the field, it is not afraid to take the path towards future-oriented possibilities.
